

1

2

1.0 The context of our ocean pools

- **Post war and depression era projects** generated jobs and stimulated the economy
- Established a legacy of public recreational amenity which is now **enjoying a revival**, heightened by a focus on access to public infrastructure

SGS NICOLE LARKIN
DESIGN ARCHITECTURE

3

1.1 Challenges to Ocean Pools

1. Structures reaching the **end of their design life**
2. **Upgrading** turn of the **century assets** within current day standards and expectations
3. Climate change and **stranded asset risks**

SGS NICOLE LARKIN
DESIGN ARCHITECTURE

4

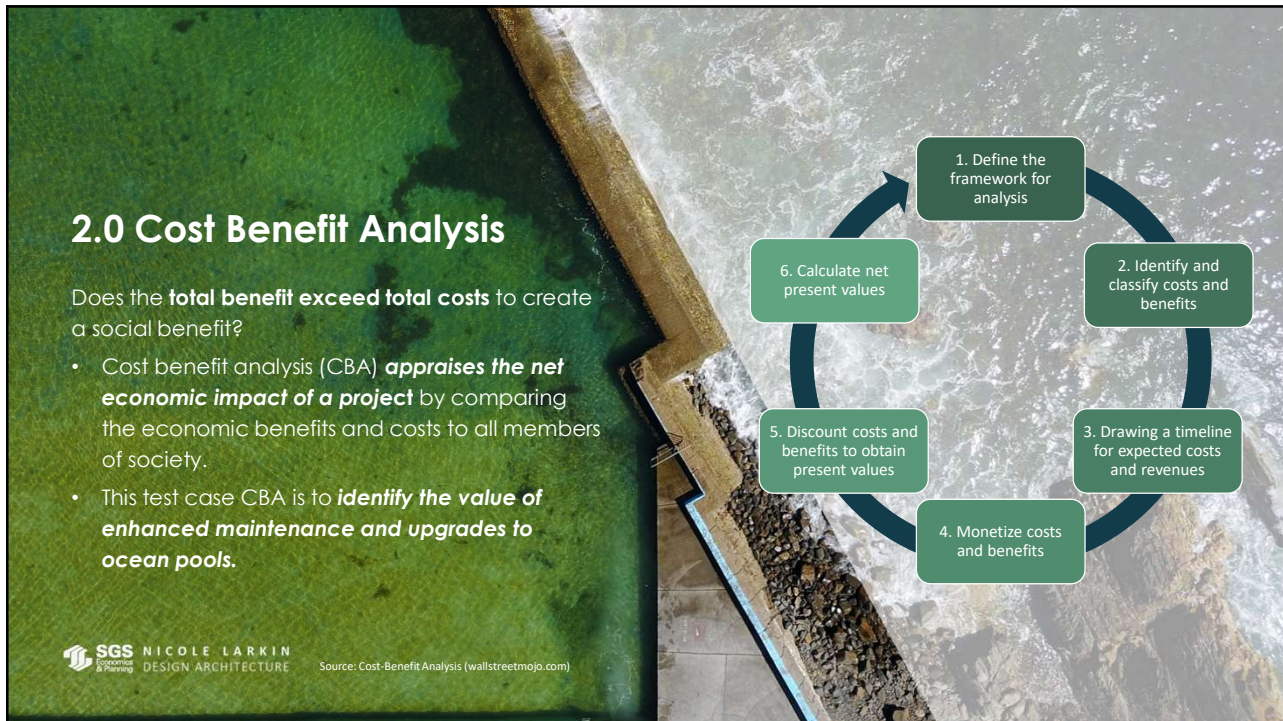

1.2 Value of Ocean Pools

1. **Revitalizing and future proofing** likely to require significant investment
2. Framing investment in a **cost benefit framework**
3. Understanding the **impact on individual pools and the whole group** as a state-wide coastal asset
4. **Systematic direction** of conservation and upgrades to maximize benefits

SGS Economics & Planning NICOLE LARKIN DESIGN ARCHITECTURE

5

2.0 Cost Benefit Analysis

Does the **total benefit exceed total costs** to create a social benefit?

- Cost benefit analysis (CBA) **appraises the net economic impact of a project** by comparing the economic benefits and costs to all members of society.
- This test case CBA is to **identify the value of enhanced maintenance and upgrades to ocean pools.**

1. Define the framework for analysis
2. Identify and classify costs and benefits
3. Drawing a timeline for expected costs and revenues
4. Monetize costs and benefits
5. Discount costs and benefits to obtain present values
6. Calculate net present values

SGS Economics & Planning NICOLE LARKIN DESIGN ARCHITECTURE

6

2.1 'Non-traded' values

Most ocean pools are free –ie. no 'traded value' to measure their worth

- | | |
|--|---|
| 1. Recreational | pleasure enjoyed by individuals at the pool |
| 2. Environmental | engineered habitats and propagated ecosystems |
| 3. Wellbeing/health | swimming and exercise , healthier people |
| 4. Tourism | expenditure by visitors (to NSW) |
| 5. Cultural and heritage | symbolic and cultural value of pools |
| 6. 'Non-use' | pleasure / value experienced by non-users |
| <ul style="list-style-type: none"> • existence value • bequest value • option value | wants the rest of the community to have leave for future generations so they can enjoy it might use in future |

SGS Economics & Planning NICOLE LARKIN DESIGN ARCHITECTURE

7

2.2 Business case proposition

SGS Economics & Planning NICOLE LARKIN DESIGN ARCHITECTURE

CASE A
Strategic and systematic management

This is the project case that is, additional resources for operating and a systematic refurbishment program

Current benefits maintained in perpetuity

CASE B
Business as usual

Assume 'run to fail' that is, one pool lost every 5 years

Still get benefits however they taper off.

Net Present Value
CASE A – CASE B

8

2.3 Quantifying net benefits

Benefits	Monetisation techniques	Source
Recreational (User benefit)	Visitors: 150,000 (e.g. Dee Why Pool) Opportunity cost of leisure: \$18.40 Duration including travel time: 1 hour	https://www.atap.gov.au/parameter-values/road-transport/3-travel-time
	Recreational benefit: 150,000 × 1 × 18.40 = \$2.76 million	'Oceans Pools- Contemporary Coastal Engineering Meets the Steam age' – James Carley UNSW WRL
Environmental	Not measured	
Wellbeing / health	Health benefit per visit to aquatic activity area: \$26.39 Visitors: 150,000	rfs-economic-benefits-report-2017.pdf [swimaustralia.org.au]
	Health benefit: 150,000 × 26.39 = \$3.96 million	
Tourism	Interstate and international visitation – expenditure for the state – accommodation and spending - difficult to isolate - marginal	
Cultural and heritage	Heritage value WTP per person: \$51.25 Catchment population: 31,043	https://profile.id.com.au/northern-beaches/about?WebID=250#:~:text=The%202021%20Estimated%20Resident%20Population,7%2C024%20persons%20per%20square%20km.
	Heritage benefit: 31043 × 51.25 = \$1.6 million	
Non use value	Non-use value represents individual 'willingness to pay' for the assets retention, regardless of personal use. Due to the nature of calculating the heritage value this is incorporated within that benefit. An additional non-use value may lead to double counting of benefits and therefore has been excluded.	
Total Benefits		Research results: 2.76 + 3.96 + 1.6 = \$8.32 million

9

2.4 Costs

Assumptions	Frequency	\$/per Pool
Ongoing Maintenance Costs	Yearly	\$80,000
A Allow 25% increase to current maintenance	Yearly	\$20,000
Major refurbishment costs (Ave.)	Every 20 Years	\$850,000
B Sink fund for major refurbishments ie. 3 pools refurbished every year over 20 years	Annual contribution	\$42,500
C Additional maintenance and refurb costs per ocean pool (A+B)	Annual	\$62,500

10

2.5 Weighting – Pools as a Group

Total Ocean Pools In NSW 59
 Average Visitation (Dee Why) 150,000

	Ave./Year	Value + 50%	Value -50%
Benefits	\$8,320,000	\$12,480,000	\$4,160,000
Net additional costs (C)	\$62,500	\$93,750	\$31,520

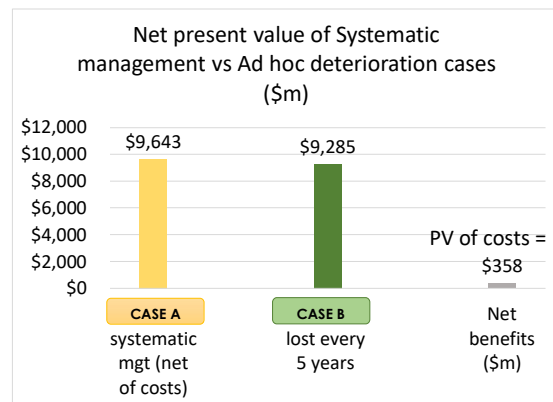

Weighted distribution	Benefits	Costs
50% perform at ave.	\$245,440,000	\$1,843,750
25% perform above ave.	\$184,080,000	\$1,382,813
25% perform below ave.	\$61,360,000	\$460,938

Annual benefits and costs across 59 Ocean Pools	\$490.8M	\$3.6M
---	----------	--------

11

2.5 Test case cost benefit analysis

12

3.0 Systematic direction of resources

1. **Realisation of expanded benefits** through systematic direction of policy and resources (Maximising net value)
2. **Strategic/systematic management** (Nominating which pool is appropriate for what and when) Nuanced upgrades for specific uses

13

3.1 Application

1. Coastal Management Programs
Manage and protect ocean pools. Inform systematic management of multiple ocean pools in an LGA.
2. Business Cases/Capital Works Funding
Demonstrate cost benefit analysis to underpin a business case or qualify for funding
3. Strategic Coastal Policy and Planning
Management and leverage of ocean pools as a state-wide asset-pool. Facilitate staged upgrades and equitable distribution of pool types/facilities
